

# Amgrow Wettasoil Water Crystals

## Wettasoil Water Crystals

- Swell to hundreds of times their weight when water is added
- Provides a supply of water right at the rootzone
- Helps plants to withstand periods of dry weather and infrequent watering
- Will last in the soil for several years continuing to absorb moisture and rewetting the roots day after day
- Ideal pre-treatment for lawns, garden beds or potted plants
- Low toxicity for people

### How to Use:

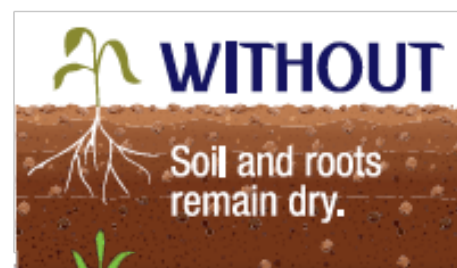

**Potted Plants.** Mix 1g of Wettasoil Water Storage Crystals for each litre of potting mix and mix well. Pot the plants and then water heavily to fully charge the water storage crystals.

**Planting Shrubs.** Place 5 grams (a teaspoon) of crystals at the bottom of the planting hole. Mix another teaspoon full with the soil that will be used to fill the hole. Once the plant is in place water heavily.

**Preparing garden beds.** Spread 10 grams of crystals per square metre of garden and dig into the soil to spade depth. Water heavily.

**Laying Turf.** Spread 10 grams of crystals per square metre. Lay the turf and then water heavily. See label for full directions.

Note: A teaspoon holds 5 grams
