**Saves Water and Helps plants grow better.**

Wettasoil Professional Soil Wetter Granular is an easy to use wetting agent for gardens, lawns and potted plants. Each granule is impregnated with a concentrated environmentally safe wetting agent, plant extracts, amino acids and growth stimulants.

When the granules become wet after watering or rain, the wetting agent is released from the granules assisting the water to penetrate and spread through dry soil or potting mix.

Similarly the plant extracts and growth stimulants will be released into the soil. These will assist soil health, aid nutrition and assist plant recovery from periods of water shortage.

The soil wetter will remain active in the soil for up to 12 months but to achieve best results the product should be reapplied every six months. This makes rainfall and watering work more effectively, eliminating dry spots, reducing plant water stress and creating a healthier soil environment. This saves water and helps the plants to grow more effectively.

Wettasoil Professional Granular will not harm pets, soil, earthworms, waterways and is frog friendly and safe for the environment.

**How to apply Wettasoil Professional Granular Soil Wetter.**

It could not be easier. Simply sprinkle the granules, at the rates shown, over the area to be treated.

No sticky liquids, no mixing, no fuss. Wettasoil Professional granules can be simply applied to the surface of existing garden beds & pot plants, when laying turf, onto the garden as new beds are made, or when planting out potted plants.

Apply the granules every six months or when water does not penetrate easily. Applying before periods of rain will assist in building up reserves of soil moisture for the drier periods.

Wettasoil Professional Granular can be applied directly to existing mulch. While mulches assist in retaining moisture, they can become water repellent. The addition of granules to the mulch will ensure that the water penetrates the mulch and reaches the soil.

TIP: Wettasoil can be used at the same time as fertilising. Apply in Spring and Autumn to lawns to ensure fertiliser penetrates the soil.

**Application Rates**

**Lawns, gardens, planter boxes and mulches**

Soil Type	Rate per sqm
Clay	30g
Loam	40g
Organic soil blends	50g
Sand	50g

**Pot plants**

Pot Size	Rate per pot
150 mm	4g
200 mm	8g
400 mm	16g

**Measuring Help**

1 teaspoon	= 5g
1 handful	= 40g
1 cup	= 200g
