

Wettasoil

Amgrow water storage crystals swell to hundreds of times their weight with the addition of water. The water holding gel that is formed provides a reservoir of water near the plant roots that enables them to withstand periods of dry weather and infrequent watering.

WATER CRYSTALS

Holds water in the root zone
Use in pots, gardens and turf

HOLD
WATER
UP TO

100x

ITS OWN
WEIGHT

**NON
TOXIC**

Net Weight 250 g

POTTED PLANTS: Mix 1 g of water storage crystals for each litre of potting mix. Mix well. Pot plants and then water heavily to fully charge crystals. For established pot plants, poke some holes into the potting mix and pour a small amount of crystals into the bottom of each hole. Water heavily.

PLANTING SHRUBS: Place 5 g (a teaspoon) of crystals at bottom of planting hole. Mix another 5 g with the soil that will fill the hole. When plant is in place water heavily to fully charge the crystals. For established shrubs, poke a number of holes around drip line and pour a small amount of crystals into each hole. Water heavily.

GARDEN & LAWN PREPARATION: Spread 10 g of crystals per square metre of garden or lawn. Dig into soil. Water heavily.

WITHOUT

Soil and roots
remain dry.

WITH

Moisture is held in the soil
and around the roots.
