

# BLOOD & BONE

## *Based Fertiliser*

**Amgrow Blood & Bone** based fertiliser is a pure organic source of nitrogen and phosphorus. The slow release of these organic nutrients will provide a sustained feed for plants and help improve the quality and quantity of flowers, fruit and vegetables. The organic content of blood and bone will also improve soil drainage, aeration and moisture retention.

**Amgrow Blood & Bone** based fertiliser is also an ideal pre-treatment for new garden beds. Digging it into the soil several weeks before planting distributes the blood and bone throughout the soil and allows time for the nutrients to become available for uptake by the plant.

The slow release and organic nature of **Amgrow Blood & Bone** makes it suitable for use with native plants – provided the directions are followed.

TYPICAL ANALYSIS	% w/v
<b>Total Nitrogen (N)</b>	<b>3.2</b>
As organic	3.2
<b>Total Phosphorus</b>	<b>1.8</b>
As citrate soluble	1.4
As citrate insoluble	0.4
<b>Total Potassium (K)</b>	<b>0.1</b>
As organic	0.1
Calcium (Ca) % as organic	4.8
