

# BEEKEEPER

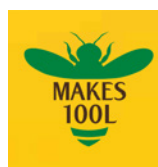

**NEW PRODUCT**

Worldwide bee populations are reported to be in decline. Without bees we will see a dramatic reduction in the quantity of food produced due to low pollination rates. Modern farming techniques, disease, decline of natural habitat and overuse of insecticides have contributed to this decline.

## Encourage **MORE** bees into your garden!

### **Beekeeper**

- ✓ Beekeeper is a bee attractant that contains honey bee attractants and controlled release formulation aids
- ✓ Beekeeper induces bees to boost their instinctive feeding behaviour
- ✓ Beekeeper unlike other inferior bee attractants, contains no sugars or honey which can distract the bees from the pollen
- ✓ Beekeeper is recommended for a wide range of fruit, nut, vegetable, forage and legume crops as a means of maximising fruit set through greater pollination from increased bee activity and numbers
- ✓ Beekeeper is Australian made for Australian bees.

### **500mL PACK**

ACTIVE CONSTITUENT:  
250 g/L HONEY BEE  
ATTRACTANT FRAGRANCES  
750 g/L CONTROLLED  
RELEASE AIDS
