

Amgrow Patrol Fire Ant Killer

Why Australia needs Amgrow Patrol Fire Ant Killer

Fire ants are one of the worst invasive species to reach Australia. These dangerous, highly mobile pests infest a large area of South East Queensland and have also spread over the border to northern New South Wales.

Fire ants inflict a painful sting causing the sensation of being on fire, which can, in rare cases, cause a severe acute allergic reaction (anaphylaxis).

These ants can severely damage the environment, impact our outdoor lifestyle, and the agriculture and tourism industries.

About

Patrol Fire Ant Killer is a granular treatment that is approved for Fire Ants, Yellow Crazy Ants and all other species of ants. It is fast and effective in controlling ants around the home as it is a non-repellent formulation meaning it will be transferred back to the nest for total colony elimination.

It is ideal for home DIY as it is an odourless non-scheduled poison (safe) that requires no special equipment, no specialised training, no mixing, and no cleaning up. Both the 1kg and 3kg size containers are a ready-to-use shaker pack for easy application.

How to use

Apply to areas where ants are active by sprinkling evenly over the area to be treated. Where possible, apply directly on and around ant nests or trails.

When applied to pavers, sweep excess product into cracks for best control.

Before treatment, remove animals and pets from the areas to be treated.

DO NOT apply within 2 metres of a fishpond or water containing fish or aquatic species.

Always read the label before use.
