

# Stratagem® Wax Block

Rodenticide

**Durable, stable and cost-effective bait, ideal for year round protection from rodents**

Stratagem® Wax Block is formulated into an extremely durable block, resisting both extreme temperatures, moisture and mould. It is a highly appetising bait block for rodents that only takes a single feed for a lethal dose.

Quick and easy to use Stratagem Wax Block's central hole allows for firm anchoring within bait stations and prevents removal and relocation by rodents, reducing the risk of consumption by non-target species.

- Extremely appetising to rodents
- Kills in a single feed
- Securable, ready-to-use bait
- Weather resistant block
- Second generation anticoagulant rodenticide

# Stratagem® Wax Block

## Rodenticide

Stratagem® Wax Block Rodenticide brings one of the most effective and powerful anticoagulant rodenticides for rat and mouse control. The high potency active ingredient in Stratagem Wax Blocks only takes a single feed for rodents to consume a lethal dose, providing fast and reliable control. Stratagem Wax Blocks are formulated as a cracked cereal grain block with a low wax content, ensuring exceptional palatability and stability are maintained under hot and cold conditions. Stratagem Wax Block has been developed using BASF's patented Fortec® Technology, ensuring feeding preferences for rats and mice are met in a single palatable formulation.

SITUATION	PEST	REMARKS
In and around industrial, commercial, agricultural and domestic buildings.	Rats	Select suitable bait locations, such as within active rat holes, along runs and under rubbish. Try to establish a barrier of bait locations between living and feeding areas. Secure 3 or 4 Stratagem Wax Blocks at each bait location on wire or nails, or inside rat bait boxes. Place 1 or 2 baits in each rat hole. Inspect the bait locations after 3 days and select new locations where there has been no take. Inspect again 4 days later and replace eaten blocks. Repeat bait station inspections at 7 day intervals, replacing fresh blocks only when blocks have been eaten, until all signs of rat activity have disappeared. Normally only 3 to 4 baiting rounds (pulses) are required.
	Mice	Mice have very limited home ranges and do not need to drink. They are more difficult to control than rats due to more erratic feeding patterns. Therefore selection of bait locations is even more important. Secure 1 or 2 Stratagem Wax Blocks on wire or nails, or inside mouse bait boxes 2 metres apart in areas where activity is obvious, particularly where droppings are seen. In domestic premises, secure 1 to 2 blocks on wire or nails or in mouse bait boxes, in sheltered positions, inaccessible to children and pets, where mice are active such as under flooring, inside ceiling cavities, along pipe runs and conduits and behind skirting boards, furniture and appliances. Inspect bait locations and replace blocks as for rats until all signs of mouse activity have disappeared.

Refer to the product label for full directions and use table.

## Packaging

3.2kg and 6kg buckets
