Seaweed Extract

Treats up to **150** square metres

2 Litres

**Improved
Formulation**

Safe and Eco-Friendly around
✓ Plants ✓ Pets ✓ Soil ✓ Environment

Wettasoil

Hose-On Soil Wetter

Treatment for water repellent soil

- Wettasoil Hose-On is a ready to use soil wetting agent for use on gardens, lawns, potting mixes and mulches. It improves the penetration of water so it can reach deep down to the roots.
- Regular use will rewet dry spots and stop new ones from forming.
- More effective water penetration means you don't need to water as often; saving water, time and money.
- Wettasoil Hose-On combines environmentally friendly wetting agents with seaweed and other ocean extracts that reduce plant stress and improve soil health.
- Wettasoil Hose-On will not harm plants, pets, soil, earthworms or the environment.

Directions

This 2 litre pack will treat 150 square metres and can be applied to gardens, lawns, pots and mulched areas

- Attach Hose-On bottle to the hose
- Remove plastic plug from the sprayer
- Turn on the tap (the sprayer will immediately start spraying the Wettasoil)
- Stop spraying by removing the bottle from the hose or by turning off the tap
- After the product has been applied respray foliage with water.

This hose-on bottle can be recharged by adding 350mL of Wettasoil Concentrate and topping up with water. Wettasoil Hose-On should be part of your gardening routine. While it will last in the soil for up to 12 months, depending on soil and climatic conditions, an application every six months will provide the best results. It is best to apply prior to and during rain periods as this will build up soil water reserves and provide for better drought resistance during periods of low rainfall.

Wettasoil Hose-On can be applied as frequently as necessary to treat water repellent soil and prevent water repellence developing.

Safety: Avoid contact with the eyes. If eye contact occurs, flush eyes under running water immediately. If irritation occurs, seek medical advice.
