

Stratagem® Soft Bait

Rodenticide

A unique, high oil content, soft bait formulation for unsurpassed bait acceptance

The power of **Stratagem® Soft Bait** means it only takes a single feed for both rats and mice to consume a lethal dose, giving fast and reliable control.

Stratagem Soft Baits are formulated with a high oil and protein content, a sought after food source for rodents in breeding periods and in cooler environments.

- Unique fat-based formula for added attraction
- Extremely appetising to rodents
- Securable, ready to use bait
- Kills in a single feed
- Second generation anticoagulant rodenticide

Stratagem® Soft Bait

Rodenticide

Stratagem® Soft Bait Rodenticide has been developed into a unique, high oil content, soft bait formulation for unsurpassed efficacy even in the most difficult to control situations. Unlike other soft baits, Stratagem Soft Bait is formulated at the equivalent concentration as block formulations, making it the most potent soft bait formulation available. The unique active ingredient in Stratagem Soft Bait, Flocoumafen, is a second-generation rodenticide with a high potency. The power of Stratagem Soft Bait means it only takes a single feed for both rats and mice to consume a lethal dose, giving fast and reliable control.

SITUATION	PEST	RATE	REMARKS
In and around industrial, commercial, agricultural domestic, and public service buildings, in sewers, animal houses, wharves and around grain terminals.	Rats – <i>Rattus rattus</i> also known as Black rat, Roof rat, Ship rat or, Fruit rat and <i>Rattus norvegicus</i> also known as the Brown rat or Norway rat	3 - 5 STRATAGEM Soft Baits at each bait location 1 - 2 STRATAGEM Soft Baits in each rat hole/burrow	Select suitable bait locations, such as in active rat holes/burrows, along rat runs and under rubbish. Try to establish a barrier of bait locations between living and feeding areas. Secure 3 - 5 STRATAGEM Soft Baits at each bait location. STRATAGEM Soft Baits should be placed in areas inaccessible to non-target species, such as in bait trays, inside bait boxes or within enclosed spaces. 1 - 2 STRATAGEM Soft Baits can also be placed within each active rodent hole/burrow. On initial application, an inspection of bait locations after 3 days may be undertaken to determine activity in bait locations and new locations may be selected if necessary. A subsequent inspection may also be undertaken again after 4 days to replace any soft baits which have been eaten. For severe infestations it is recommended that repeat inspections of all bait locations are conducted at 7 day intervals, replacing fresh STRATAGEM Soft Baits only when STRATAGEM Soft Baits have been eaten and until all signs of rat activity have disappeared. Normally only 3 to 4 baiting rounds (pulses) are required for control.
	Mice – <i>Mus musculus</i> also known as the House mouse	1 - 3 STRATAGEM Soft Baits at each bait location	Mice have very limited home ranges and do not need to drink. They are more difficult to control than rats because their feeding patterns are more erratic. Selection of bait locations is therefore even more important than for rats. Secure 1 - 3 STRATAGEM Soft Baits in areas inaccessible to non-target species, such as in bait trays, inside bait boxes or within enclosed spaces, spaced 2-3 metres apart. Bait locations should be in areas where activity is obvious, particularly where droppings are seen. Inspect bait locations and replace STRATAGEM Soft Baits as for rats until all signs of mouse activity have disappeared.

Refer to the product label for full directions and use table.

Packaging

2.4kg and 5kg bucket
